Door Line **DL**

Door Line **DL**

Reliability and Durability

AXOR INDUSTRY presents door locks - AXOR Door Line DL. Like all AXOR products, door locks are characterized by reliability and durability in the operation of all the elements, the strength of high-quality materials of which all the components are made, and unique protective surface coating that ensures high resistance to corrosion. Thanks to completely closed steel case, AXOR Door locks have an aesthetic look of design and ensure the protection of all its components against ingress of dust and debris into the mechanism. Door Line DL product range includes multi-point locks, mortise locks and locks for WC.

Easy changing of the door opening direction.

The direction of the latch in the door lock determines the door opening direction. AXOR Door Line DL lock is designed in such a way that the door opening direction can be easily changed (to left or to right) with a simple movement by pulling the latch and turning it 180°. This operation can be done on the lock already installed in the door.

Increasing number of locking points

AXOR Door Line DL product range includes locks with a possibility of increasing number of locking points around the sash allowing you to install additional locking elements, which will ensure tight pressing of the door sash against the frame and improve general structural integrity.

The use of pull handle

AXOR Door Line DL product range includes locks fitted with roller latch for pull handle.

The possibility of using monoblock handle sets with 3 screw holes

The design of AXOR Door Line DL locks allows you to use monoblock handle sets with three fixing points (European standard) that allows you to securely fix the set on the door, thus it ensures longer service life.

Deadbolt in AXOR Door Line DL locks

Key-operated mortise lock has a steel deadbolt. Handle-operated mortise lock and short mortise lock with a dornmass of 35 mm are fitted with a deadbolt with steel pins, thus it makes the door more resistant to break-in.

Security pins

AXOR Door Line DL locks can be produced with mushroom pins in order to improve the lock's anti-burglar properties.

Individual branding

AXOR Door Line DL locks have a special fixing place for branding by installation of a metal plate with your logo into the lock face plate. The logo on the lock is a durable and non-standard advertising that adds distinctiveness to the product and successfully promotes your brand.
